SECTION 01

Mission

The mission of the Federation is the financial self-sufficiency of every member – the tools, the intelligence, and the open knowledge to grow their own wealth and build their own ideas, rather than depending on a black box they are forced to trust.

Any wealth-growth language in that statement points at the member's own tools, knowledge, and decisions – never at holding or price appreciation of the \$GFOF token. The Federation makes no return promises, no price predictions, and no claim that owning the token produces gains.

How the mission is made verifiable

- **Locked supply, readable live.** 13% of total supply is locked on-chain via Streamflow across four separate contracts – verifiable directly from Solana in your browser.
- **DeFi designed in public.** A borrower-protective liquidation specification was published before any lending code ships, open for public criticism.
- **Accountable by structure.** Every promise and every miss is documented on a public, append-only corrections log. Entries are never deleted. An active red-team bounty program invites attack.

Verify, don't trust. Nothing in this document asks for belief. Every material claim maps to something you can check: an on-chain contract, a published specification, or a log entry with a permanent URL.

SECTION 02

The Federation

The Galactic Federation of Finance is a research-first project on Solana. It publishes its research, its specifications, and its mistakes. Transparency is not a marketing posture; it is structural – enforced by public artifacts that cannot be quietly edited.

Two operations

\$GFOF (Operation 01) is the Federation's token: an SPL token on Solana with the tokenomics, governance, and roadmap described in this document.

Dossier (Operation 02) is the Federation's intelligence arm – a smart-money convergence detection product for Solana, live at dossiertrack.co. It has independent branding and pricing but operates inside the same structural commitments, including its own public corrections log.

The published structural link. Dossier has committed (Dossier Corrections #006) to deploying a staged percentage of its net revenue into \$GFOF/SOL liquidity on Raydium, quarterly, with on-chain transaction proof: 25% of net revenue after paid launch, stepping to 50% once \$5K MRR is sustained for two consecutive quarters. No revenue flows during beta.

Holding \$GFOF is never required to use Dossier. This routing is a disclosed mechanism with a public schedule – described as plumbing, never as price support – and it is not a promise about price or returns.

Standing disciplines

- Specifications are published before code is written.
- Language that could be read as a value claim is reviewed by outside counsel before publication.
- No paid promotion. No price predictions. No return promises.
- Method public, roster private (Dossier's detection methodology is published; its curated wallet roster is not).

SECTION 03

Tokenomics

TICKER

\$GFOF

NETWORK / STANDARD

SOLANA · SPL

TOTAL SUPPLY

1,000,000,000

DEV SUPPLY LOCKED

13% · 4 CONTRACTS

Distribution

77%

COMMUNITY & LIQUIDITY – open market supply, circulating

10%

REWARDS & RESERVE – post-bond community programs; allocation defined by governance before deployment

13%

DEV – LOCKED – 4 Streamflow contracts, verifiable on-chain, immutable; excluded from DAO voting

Mint & freeze authorities – explained honestly

\$GFOF launched on Moonshot. Per the launchpad's standard design, mint and freeze authorities are held by Moonshot's program during the pre-bond phase – the same for every token launched there. At the \$73K bond milestone, the token migrates to Raydium and Moonshot revokes both authorities automatically as part of the migration.

What is under the project's control right now: 13% of total supply locked on Streamflow across four separate contracts – fully verifiable on-chain. That is the trust guarantee available today. The rest happens at bond.

SECTION 04

Governance

The \$GFOF DAO is deployed on-chain via SPL Governance, hosted on Realms, gated to the \$GFOF mint. The full governance specification (v0.2) is published for public comment at galacticfederation.co/governance-spec.

Deployed parameters

- 1% community approval quorum · 3-day voting period · 24-hour cool-off
- 1,000,000 \$GFOF proposal threshold · vote-tipping disabled
- 1 token = 1 vote; the locked 13% dev allocation is excluded from voting

Scope at launch: advisory, by design

Holders vote on direction; no treasury funds or site/repository/token authorities are routed through the DAO yet. Authority migrates in deliberately, one proposal at a time, post-bond.

The council, disclosed. A single-member council (the founder wallet) holds a 60% veto quorum during the bootstrap phase – a safety valve against a malicious proposal, not a tool to pass things. It sunsets, by governance vote, once the project is post-bond and the holder base has materially broadened.

SECTION 05

Roadmap

- **Phase 01 — Now · Launch and Foundation.** Token live on Solana. Community building. Website live. Ambassador program active.
- **Phase 02 — Coming · Community Growth.** Federation expansion. Governance framework. Alliance partnerships. Community-driven product research.
- **Phase 03 — Future · DeFi Lending Protocol.** User-first lending with a ZK privacy layer designed in. Community designed; to be independently audited before launch.
- **Phase 04 — Beyond · The Expanding Universe.** New utilities. Community votes on what comes next.

Research track — ongoing · Post-quantum posture. The Federation tracks NIST and Solana-ecosystem post-quantum developments and maintains a public cryptographic-dependency inventory. No migration is planned or claimed; re-evaluation is trigger-based and logged. GFOF makes no quantum-security claims.

SECTION 06

Lending Vision

The Federation's lending direction is defined by a published, borrower-protective liquidation specification (v0.2, at galacticfederation.co/liquidation-spec) — released before any code ships and open for criticism.

- **Prove solvency without exposing your wallet.** A ZK privacy layer is part of the design goal, not an afterthought.
- **Prove compliance without KYC** where the design allows it.
- **Borrower-protective liquidation** as a first-class design constraint.

No lending product exists today. The specification comes first; code follows the spec; audit precedes launch. That order is a standing commitment, logged publicly.

SECTION 07

Accountability Apparatus

The **corrections log** at galacticfederation.co/corrections is the project's core differentiator: a permanent, public, append-only record of every commitment, every miss, and every correction. Entries are never edited or deleted. The keep-rate is counted strictly – disclosures and cancellations sit in the denominator rather than being excluded to flatter the number, and the page's statistics are computed live from the entries themselves so they cannot drift from the log.

Spec before code. Governance, liquidation, and token-access mechanisms each received a published specification, open for comment, before implementation. **Counsel before publish** applies to any language that could be read as a value claim.

SECTION 08

What We Do Not Claim

- \$GFOF access utility is not an investment – no yield, interest, or return for holding.
- The value of any Federation product access is independent of token price.
- The project will not market "buy \$GFOF to profit," and makes no price predictions.
- No staking specification exists: no APY, no multipliers, no rates, no tier structure. A versioned staking specification will be published for public comment before any contract is written.
- The Founding Member NFT (claimable free at the \$73K bond snapshot) is soulbound and purely commemorative – no price, yield, staking boost, multiplier, governance weight, or utility of any kind.
- GFOF makes no quantum-security claims and does not use "quantum finance" framing.

GALACTICFEDERATION.CO
If the Federation ever publishes something that contradicts this section, that is by definition a 06 corrections-log event.

NOTICES

Disclaimers & Verification

This document is informational only. It is not financial, legal, or tax advice; it is not an offer, solicitation, or recommendation to buy or sell any asset; and nothing in it is a promise of future value, returns, or performance. Digital assets are volatile and can lose all value. Do your own research and consult your own advisers.

The regulatory framework for digital assets is evolving. The Federation monitors specific legislative checkpoints and re-checks with outside counsel when they fire; that monitoring commitment is itself logged publicly (corrections entry #022).

This document compiles positions already published on the Federation's sites as of its version date. Where this document and the live site or corrections log ever disagree, the live corrections log controls, and the disagreement is itself a loggable event.
