FEDERATION WHITEPAPER

GFOF_WHITEPAPER_v1.2

Research-first DeFi on Solana. Public specifications before code.
Permanent corrections for every commitment.

CONTRACT ADDRESS

2oQmHWoTZRmRLregHKjBSGJy3ueX3iRNzimy2iZCmoon

This document is informational only. It is not financial, legal, or tax advice and makes no promise of returns or future value.

Mission and operating discipline

The Federation exists to make financial research, public design, and accountable execution easier to inspect. Wealth-growth language refers to a member's own tools, knowledge, and decisions - never to token appreciation.

The operating order is fixed: publish research, specify mechanisms, invite criticism, implement, audit, then consider launch. The append-only corrections log controls whenever a summary and the public record disagree.

SECURITY	galacticfederation.co/security
RESEARCH	galacticfederation.co/research

Federation systems

Command is the public entry point. Dossier is the intelligence arm and is currently in MEASUREMENT REVIEW: detection is halted while the original convergence thesis is measured. FCC is the public experiment record; Epoch 2 remains BLOCKED and intake is not authorized.

The Federation Record accepts falsifiable, dated, sourced forecasts under published rules. Council governance is advisory; no treasury, repository, site, or token authority is represented as decentralized.

COMMAND	galacticfederation.co
DOSSIER	dossiertrack.co - MEASUREMENT REVIEW
FCC	fcc.galacticfederation.co - EPOCH 2 BLOCKED
ARCHIVE	galacticfederation.co/record

Token and treasury

\$GFOF is an SPL token on Solana with a fixed total supply of 1,000,000,000. The canonical contract address is printed on the cover and must be verified character-by-character.

Distribution is recorded as 77% community and liquidity, 10% rewards and reserve, and 13% developer allocation locked across four active Streamflow contracts. The Treasury page links every contract and independent explorer path.

\$GFOF trades through a Meteora Dynamic Bonding Curve. Migration is triggered by the configured 66,040.882531 USDC quote-reserve threshold, not market capitalization, and targets Meteora DAMM v2. Live reserve progress is not published without a canonical source.

SUPPLY	1,000,000,000 \$GFOF
LOCKED	130,000,000 - 13% - four active contracts
MIGRATION	METEORA DBC TO DAMM V2
VERIFY	galacticfederation.co/treasury

Governance boundaries

The Realms deployment is advisory and gated to the \$GFOF mint. The locked 13% developer allocation cannot vote. No migration event transfers treasury, repository, site, or token authority.

One token equals one advisory vote under the published configuration, but voting does not imply custody or execution authority. Any authority change requires a new specification, security review, and recorded authorization.

SPEC	galacticfederation.co/governance-spec
CURRENT SCOPE	Advisory only
AUTHORITY	Not routed through the DAO

Roadmap with receipts

The roadmap is a status map, not a calendar. Operational systems, active gates, specifications, research, and uncommitted work are separated. Dates appear only after a dated commitment is recorded.

Status can change faster than this document. The live roadmap and append-only corrections log are the current sources for gates, reviews, and completed work.

STATUS MAP	galacticfederation.co/roadmap
CONTROLLING RECORD	galacticfederation.co/corrections
NO IMPLIED LAUNCH	A specification is not a deployed product

Specifications and research

Published design documents cover governance, borrower-protective liquidation, access boundaries, and creator-fee routing. They are historical design artifacts, not proof of implementation or launch authorization.

The prior venue-specific access routing and creator-fee mechanism are superseded and inactive. Corrected specifications, review, and recorded authorization are required before activation.

Post-quantum work is research only. No cryptographic migration is planned and no quantum-security claim is made.

LIQUIDATION	galacticfederation.co/liquidation-spec
ACCESS	SUPERSEDED IN PART
CREATOR FEES	ON HOLD
POST-QUANTUM	galacticfederation.co/faq#quantum

What is not committed

No staking specification exists. No APY, reward rate, lock tier, multiplier, or launch date is committed. The Founding Member NFT carries no promised boost, yield, governance weight, investment value, or access utility.

No lending launch date, exchange-listing date, return promise, price floor, passive-income claim, or price prediction is made. Holding \$GFOF does not itself produce yield.

If a future system is proposed, its specification and risks must be published before code and audited before any launch claim.

STAKING	NOT COMMITTED
NFT UTILITY	NOT COMMITTED
RETURNS	NEVER PROMISED
SOURCE OF TRUTH	galacticfederation.co/corrections

Verification and notices

Verify material claims independently. Use Solana explorers and Streamflow for locks, GitHub and the FCC record for published artifacts, and the corrections log for commitments and supersessions.

This document is informational only. Digital assets are volatile and can lose all value. Nothing here is an offer, solicitation, recommendation, or promise of performance. Consult your own legal, tax, and financial advisers.

Where this whitepaper and the live corrections log disagree, the live corrections log controls and the discrepancy is itself a loggable event.
